Method behind xx-sentiment.xml not documented #85

New issue

Open fhs m opened this issue on Jul 3, 2014 · 1 comment

fhs m commented on Jul 3, 2014

I am trying to sort out where the `text/xx/xx-sentiment.xml` data come from. The [unit tests](#) include some proof of utility but I cannot find any documentation of the methodology used. After a lot of searching my best guess is that these are from [De Smedt, Tom, and Walter Daelemans](#). "Vreselijk mooi!" (terribly beautiful): A Subjectivity Lexicon for Dutch Adjectives. LREC. 2012.

SentiWordNet is clearly called out in the docs. It would be nice to source the custom lexicon that ships with the package.

Bit over a year on this issue. I'd be happy to make a PR w/ updated docs if someone can provide the actual info. In the interim I also gave The 2012 JML paper a look which explicitly calls out the sentiment capability but fails to explain how all but the Dutch lexicon were arrived at. <http://www.jmlr.org/papers/volume13/desmedt12a/desmedt12a.pdf>
